About Me..

Hello everyone ! I am Pujya Chadha. I am 11 years old. I live in Dubai. I like playing badminton, exploring about new technologies and building Legos. I'm very inquisitive, confident and creative by nature.

My professional dream is to get into Data Sciences , AI , Robotics, as I think these are the building blocks for the future. I also want to be a professional badminton player.

About My Internship with Clevered..

Badges Earned

- Rockstar(for Wonderful Efforts for Project Completion)
- Rockstar Recognition for Attentiveness

How was this internship?

This internship was rather amazing. As this project was based on block coding i understood the lessons well as I have had exposure with block coding in school, and in my data science course that I am currently doing with Clevered also.

About App..

App's Introduction

I have created a chat bot for my internship. What does my chat bot do? You can ask my chat bot about the different capitals of different cities. Not only this but this will also give you some information about the cities such as their area, why they are famous and many more!!! 😊

How do I use the App?

1. First click on the green flag
2. The chatbot will ask you how you are and you can reply in things such as good, great, okay, bad and some more
3. You can ask the chatbot the capital of countries such as : France, Spain, Greece, Japan, India and UAE.
4. The chatbot will tell you some information about the capital of the country as well as it will display the text and an image of the city in the background.
5. If you want to stop it you can press the red octogen.

Option Name

(This will be repeated for each option of the App)

Any special considerations

Some of the things that you should keep in mind while trying my chatbot are:

1. Stable inter net connection- This is so the chatbot doesn't lag in the middle or stop while you are trying it
2. Use google chrome- With my ups and downs during the internship one thing I realized is that some platforms such a safari and Microsoft edge.
3. Microphone- Before trying my project make sure that your mic is working properly so the chatbot can hear you.
